

Department of Environmental Protection Division of Air Resource Management: General Permitting Compliance Information (GPCI) Enterprise 24x7 Inc. Project Summary

Overview

The Web-based GPCI Application holds compliance data for facilities operating under an Air General Permit and allows upload of compliance checklist documents in PDF format. Enterprise 24x7 Inc provided IT consulting services to assist DARM with the completion of Information Technology (IT) service requests. Service requests were related to software applications and systems designed for the support of programs, processes and other activities implemented for the purpose of developing, deploying and maintaining the GPCI application.

E24X7INC Services

The E24X7INC **System Analyst (SA)** was responsible for the design and development of IT system enhancements and new features. The SA developed design and functional specifications, produced deliverables related to the project(s), assigned and assisted in post implementation support and system enhancements. Responsible for applying appropriate C.A.S.E. tools to develop system features. The SA was responsible for gathering, compiling and synthesizing information with regard to technology processes and systems. The SA was involved in the full systems life cycle and was responsible for designing, coding, testing, implementing, maintaining and supporting applications software to ensure each new feature was delivered on time and within budget.
