

Florida Department of Agriculture & Consumer Services (FDACS)

Division of Licensing: Bureau of Agriculture Dealer's Licenses

Licensing Analysis Project

Enterprise 24x7 Inc. Project Summary

Overview

The Bureau of Agriculture Dealer's Licenses wanted to identify the core common elements across all the agency licensing bureaus and to identify the differences, so a core application could be developed that could reduce the need for numerous, disparate applications and therefore the on-going maintenance costs.

The project was a deliverable-based project that included not-to-exceed limits on each deliverable.

E24X7INC Services

The E24X7INC **Project Manager (PM)** for the analysis effort. The PM directed the analysis team in the areas of scheduling, technical direction, future planning and project management best practices. She participated in requirements gathering sessions with the team and performed internal QA reviews on the deliverables prior to submission for client acceptance. The PM monitored scheduled milestones to ensure project objectives were met in a timely manner and possessed in-depth knowledge of the principles, theories, practices and techniques for managing the activities related to systems analysis and IT solution proposals.

The E24X7INC **System Analyst (SA)** was responsible for gathering and summarizing the requirements of the licensing applications across the bureaus and noting the common features and the differing features. The SA developed design specifications for a proposed IT solution that could leverage the common features and provide flexibility needed to address the unique requirements by license type.

Technologies Leveraged

- Oracle Forms
- Oracle Database
- MS Visio
- Oracle Reports
- MS Access
- MS Office
- MS Project
